

NETFLIX DATA ANALYSIS USING POWER BI

1. Introduction

This project analyze Netflix content and customer viewing behavior using Excel and Power BI. The main purpose is to understand content popularity, customer engagement, ratings, genres, and subscription patterns through interactive dashboards.

2. Problem Statement

The project aims to analyze Netflix's content and customer viewing behavior to derive meaningful business insights. The data is cleaned and visualized to understand customer engagement, content popularity, and subscription trends.

3. Objectives

- Identify popular movies and TV shows based on watch time and ratings.
- Understand customer demographics and viewing preferences.
- Analyze subscription types and their relationship with watch time.
- Study genre popularity, ratings, and customer engagement.
- Compare content performance across countries.
- Create an interactive Power BI dashboard for easy analysis.

4. Tools Used

- Excel – Data cleaning and preprocessing.
- Power BI – Data analysis, visualization and dashboard creation.

5. Data Analysis

The dataset contains Netflix show information such as title, type, director, cast, country, date added, release year, content rating, duration and genre. The customer dataset contains customer details, subscription type, watch time and ratings. The data was cleaned and then used to create Power BI visuals.

6. Key Insights

- Content can be compared based on total watch time and customer ratings.
- Movies and TV Shows can be analyzed separately to understand their performance.
- Customer age groups and subscription types help identify viewing patterns.
- Genre and country analysis helps understand audience preferences.
- Ratings and watch time provide useful indicators of customer engagement.

7. Conclusion

The Netflix Data Analysis project shows how Power BI can be used to convert raw Netflix data into useful business insights. The dashboard helps understand customer engagement, content performance, ratings, genres and subscription patterns. These insights can support better content planning, customer engagement and subscription strategies.

8. Future Improvements

The analysis can be improved by adding more recent data, advanced customer segmentation, prediction of content popularity, and deeper country-wise analysis.
